

Before installing your new M.O.C. Board, please read the SAFETY WARNING below.

Important Magnet Safety Warning!

Disclaimer: MOCWoodworks, NePalo Cabinetmakers or its owners neither assumes nor accepts any liability for damages resulting from the handling or use of magnets. With your purchase, the buyer confirms that you have read and understood the following warnings, the buyer agrees that he/she is responsible for all damages and injuries caused by the magnets, which include personal injuries, property damages and magnet damages. The buyer must agree with the terms before purchase.

Neodymium magnets, which are used inside of our products, are very strong. Handling them with care is necessary to prevent personal injuries, property damages and magnet damage.

1. Normal Neodymium magnets will lose their magnetic properties if heated above 175°F (80° C).
2. The strong magnetic fields of neodymium magnets that are used in your M.O.C. Stud Finder can damage items such as television, computer monitors, credit cards, bank cards, computers, diskettes and other data carriers, video tapes, mechanical watches, hearing aids, loud speakers and VCRs. Pace-makers may be damaged or switch to "Test Mode" in the presence of a strong magnetic force, if a pace-maker is in use, keep a minimum of 3 feet distance.
3. Children should not be allowed to handle neodymium magnets that are inside the M.O.C. Stud Finder as they can be dangerous. Small magnets pose a choking hazard and should never be swallowed or inserted into any part of the body.
4. Under no circumstances should you try to cut, saw or drill the Neodymium magnets which are inside our products! Not only would the magnet break, but the resulting dust from the magnet is very flammable. Neodymium magnets should never be burned, as burning them will create toxic fumes.

Use instructions

The M.O.C. Stud Finder is based on a very simple concept-the drywall in your house is attached to the studs with screws and unless the builder used non-ferrous screws, a rare earth magnet will find those screws.

Just sweep across your wall with the M.O.C. Stud Finder magnet side facing the wall. When the M.O.C. Stud Finder grabs the wall, you have found a stud. Mark it with a pencil using the notch at the bottom of the M.O.C Stud Finder. If you want to find another stud, slide your M.O.C. Stud Finder to the right or left and you will probably find another screw at more or less the same height 16 inches away. It is that easy!

When not in use, you can use it to hang your photos around your home or office by finding a screw in your wall and trapping the photo between the wall and the M.O.C. Stud Finder.
